

API Reports

OVERVIEW

API Reports page gives you an overview of how many API calls you have made for each of your API accounts and how many of them have been successful as well as how many of them failed.

By default, the numbers shown on this page belong to the last 7 days, however, you can change this by filtering by the dates you're interested in.

HOW IS IT USED?

1. When you land on the API Reports page, the first thing you need to do is to choose the API account you'd like to see the report for and hit "Generate Report".

[image-1622464177868.png](#)

2. Then you'll see the statistics on each type of request made from your API account of choice.
